

### **Problem Statement 1 : ATM Minimum Balance Check**

A bank requires customers to maintain a minimum balance of ₹5,000 in their savings account.

Write a Python program that accepts the current account balance from the user. If the balance is less than ₹5,000, display a warning message indicating that the minimum balance requirement is not maintained.

#### **Sample Input**

Enter Account Balance: 3200

#### **Sample Output**

Warning! Your account balance is below the minimum required balance of ₹5000.

#### **Sample Input**

Enter Account Balance: 8000

#### **Sample Output**

(No output)

---

### **Problem Statement 2 : Movie Ticket Eligibility**

A multiplex allows entry to a movie only if the customer is 18 years of age or older.

Write a Python program that accepts the age of a customer and determines whether they are eligible to watch the movie.

#### **Sample Input**

Enter Your Age: 21

#### **Sample Output**

You are eligible to watch the movie.

#### **Sample Input**

Enter Your Age: 15

#### **Sample Output**

You are not eligible to watch the movie.

### **Problem Statement 3 : Student Grade Calculator**

A school assigns grades based on the marks obtained by students according to the following criteria:

- Marks 90 and above → Grade A
- Marks 75 to 89 → Grade B
- Marks 50 to 74 → Grade C
- Below 50 → Grade F

Write a Python program to accept marks from the user and display the corresponding grade.

**Sample Input**

Enter Marks: 92

**Sample Output**

Grade A

**Sample Input**

Enter Marks: 80

**Sample Output**

Grade B

**Sample Input**

Enter Marks: 65

**Sample Output**

Grade C

**Sample Input**

Enter Marks: 35

**Sample Output**

Grade F
